S
Insect-control
(Big Hole)

Forest Supervisor,

Butte, Montana.

Dear Sir:

The following is a report on the insect control accomplished by Chas Ferguson and myself, from the ridge north of pintlar creek to seymour creek.

A total of 37 new infested trees were found, locations as indicated on attached diagram.

All trees found had been opened up by woodpeckers none showed any live larvae higher than 5 ft from the the ground, this indicates that they were either froze out or the woodpeckers got them above the snow.
A total of 59 trees were treated the balance being either pitched out or showed nothing.

Very Truly Yours

E W Kurtz

District Ranger
